## **WinSSHTerm Portable**

Provides an environment where you can create macros for any app. In addition to supporting a large number of apps and services, KeyMACRO is also the only app of its kind which allows you to control and monitor macros on any platform you are using. KeyMACRO is free to use and to download, and there is a limited number of copies available. That being said, if you purchase a license KeyMACRO will be sent to your email address. Why is KeyMACRO so much better than other Macro Keyboards? KeyMACRO will record any action you take. For example, you can record a standard keyboard shortcut for typing a name into an address bar or recording a menu option for a program. In addition, any other keystroke, mouse event, scroll event or window movement will be recorded. There is no limit to the number of actions you can record. Actions recorded by KeyMACRO can be played in any order in any order and there is no limit to the number of actions you can play. KeyMACRO is a universal keyboard macro program. KeyMACRO will work across all versions of

Windows and OSX. Why is KeyMACRO better than other Apps that Record Keystrokes and Mouse Movement? KeyMACRO is the only Mac/Windows app that records from within an app. This means that when you are recording you are also right inside the app. Not only that, but we can take advantage of the specific features of the app to make your work easier. When you record a keystroke or mouse movement, we ask for your selection so that we can place a tag on the keystroke or movement. This tag then allows you to easily find what you have recorded. KeyMACRO's simple user interface is designed to allow you to make a great deal of macros without much configuration. Each keystroke has its own tab, so you can easily see where you are in your macro. Just click a keystroke to start a new tab and start recording. KeyMACRO is the only Mac/Windows app that can generate a login keystroke. We can record the keyboard shortcut you use when logging into a server to make sure you don't have to type it in every time. KeyMACRO can record hotkeys that run scripts. By default, KeyMACRO will record a hotkey for you to select a script. This means you don't have to run the script by hand to make 2edc1e01e8
