In **My opinion**, Lightroom had the best workflow for non-Photoshop users. Adobe says its data model is better and more automated. I am not sure if I can actually notice a big difference in Lightroom, but I've already been using it for over a year and I'm glad I moved on. That said, I do appreciate the fact that Lightroom is open-source which allows the team to be nimble. For some time now, I've been unable to ditch Adobe Photoshop. The app has been integral in my workflow. It has excellent tools for resizing and retouching. There is the ability to clean up images, correct or adjust contrast, color, shadows, and highlights, isolate unwanted objects and correct images that have orientation errors. It supports unlimited layers and masks, and can perform batch edits in groups of items and manage layers easily. There's no shortage of editing tools in Photoshop. But Lightroom's workflow for non-Photoshop users works particularly well to provide a smooth path for successful image editing. For example, though I like to use Lightroom to organize my images, it will also allow me to apply basic edits while it automatically assigns keywords and creates tags.

Adobe Photoshop CC is now even more powerful than it was the last time I reviewed it. But while Photoshop CC is an excellent makeover release, the new version does not create many new features. The most important issue is that we now need additional memory to run it well; thanks to the new GPU and memory parallelization. Also, we are faced with the side effect of having to format the SSD for large files (and Adobe recommends more than 2 GB). Of course, we also need additional RAM for the memory management and caching for better performance. If you don't have the ability to resize your image to a high resolution, there are many alternatives out there. An excellent product to try is **Graphicsmagick**. Lightroom provides a simple interface for general image editing, but Photoshop CC or another app like **IridientDigimarc** have higher-level capabilities. Given the price of Photoshop CC, you may ask whether such a tool justifies the expense.
