Brightness and effect speed are user adjustable. One thing to note though is that the colors emitted from the Busellog are very distinct and may not be suitable for heavy use, especially in a darkened room. (A 22-inch LCD can emit 500 lumens on a dark screen and up to 1,200 lumens on a brightly lit screen, if you're familiar with LED TVs). Whereas the Busellog uses all 12 LEDs, the ZatZat uses only 4 of them, so you get more blue, white, and amber LEDs and less red and green. The Busellog system is more expensive ($49.99) but is more flexible in that you can configure the LEDs to give you your choice of colors and colors at different brightness levels. Why the name? Here's the original Busellog and the "Busellog" you see at the theater. A friend told me that this appeared to be the Busellog in the theater lobby, but I have a hard time believing that. The ZatZat is a smaller, more compact unit than the Busellog and can be used in a variety of ways, such as the photo below. In this last photo, a portable lamp and 4-color (the number of LEDs in this device) is used to send an array of colors and effects to a large, overhead screen in a busy theater.1. Field of the Invention This invention relates to an improvement in the structure of a gas turbine engine. 2.
